PERMISSION OF USE

In presenting this project in partial fulfillment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this project in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor or, in their absence by the Dean of Postgraduate Studies and Research. It is understood that any copying or publication or use of this project or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my project.

Requests for permission to copy or to make other use of materials in this project, in whole or in part, should be addressed to

**Dean of Awang Had Salleh Graduate School

ABSTRACT

Sharing information between organization and companies plays important roles in achieving good performance. When the organization or companies want to share any type of data especially the personal and health information, such information or data are available in the hospital for sharing. The information sharing has categories like the data maintenance for privacy, value and validity. This study focuses on investigating the existing approach of sharing and retrieving patient information and to develop prototype to make electronic health record more easy to access.. A web-application prototype was developed using ASP.NET SQL Server2005 for sharing patients' information. Finally, the users' satisfaction of the developed prototype was measured using IBM Computer Usability Satisfaction Questionnaires.

DEDICATION

I humbly thank Allah Almighty, the Merciful and the Beneficent, who gave me health, thoughts and co-operative people to enable me achieve this goal.

I wish to dedicate this work to Holy Prophet Muhammad (Peace be upon him) and his companions who laid the foundations of Modern civilization and paved the way for social, moral, political, economical, cultural and physical revolution.

I would like to thank and extend my deep gratitude to my supervisor Dr AbdulJaleel K. Shittu. I was extremely fortunate to have him as my primary source of knowledge, guidance, and support throughout the process of my project, and I would certainly be even more fortunate to benefit for his wide experience in my future academic undertakings. In short, this work could not have been accomplished without his enlightenment. Thank you very much.

Special thank to those who supported me with their prayers particularly my mother, aunt, uncle "Ahmad", my cousin "Ousama-abuahmad" and all of my brothers and sisters. I would like also to thank my friends in my homeland Palestine and also in Malaysia all by his name. I won't forget to dedicate this work to the soul of my father may ALLAH bless his soul and make his grave a garden and grant him the highest levels of paradise... Ameen.

ACKNOWLEDGEMENT

At the beginning of my speaking, I thank Allah for helping me in my study and guiding me to continue what I have started in my educational life. I thank Allah in every day for giving me the ability and motivation to continue this work.

After thanking Allah, I would like to convey my regards to my supervisor Dr AbdulJaleel K.Shittu for the benefit and precious information that he gave me as one of his students. I thank and honor his for helping me to complete my study in a good way.

Finally, I would like to say thankfulness word for the lecturers in the Faculty of Information Technology at Universiti Utara Malaysia.

Thank you UUM...

SUHAIL S.M.ALQRINAWI

CHAPTER ONE

INTRODUCTION

1.1 Background

Nowadays, the fast advancement and development on technology have made a new conduit between government and their citizens. This conduit allows the government to offer its services by web services. This is known as the Electronic government or “E-Government” (Kushchu, 2007). Information sharing system is defined as methods of care management and training aim at developing a know-how information sharing system (Eto, Matsui & Kabasawa, 2007).

Hospitals and physicians alike have been moving to develop the efficiencies offered by information technology. Most hospitals today have some form of medical information system, and a majority of general physicians have adopted computerized medical record. But many hospitals still lack a central patient online medical record system that includes comprehensive, up-to-the-minute treatment information on admitted patients. Instead, patients’ data are scattered across multiple record and are accessible only within each institution.

Electronic Government is the government that provides services available online for its citizens and users through electronic device such as computers, mobiles, wireless and other devices that have access to the internet (Fang & Chen, 2008). Internet and wireless devices are becoming preferable by government to deliver their services to their citizen
